Project Title: Redesign and Evaluation of the MyASUS Application for Enhanced User Experience

Course: Human-Computer Interaction

Student Name: Mohsin Abid, Alisher , M.Shahzad Amjad

Roll number: 23010101-037,003,127

Date: 23rd Feb, 2026

Instructor: Mam Shimza Butt

Human Computer Interaction Final Project Report

MyASUS Mobile Application Design (iOS Version)

1. Introduction

Human Computer Interaction (HCI) is the study of how users interact with computer systems and applications. The main goal of HCI is to design systems that are easy to use, efficient, and user-friendly.

For this final project, a mobile application interface of the MyASUS App (iOS version) was designed. The purpose of this project is to analyze and redesign the user interface of the MyASUS application using modern design principles. The interface was created using Figma and includes multiple screens connected through a proper navigation system.

The MyASUS application is developed by **ASUS** and helps users manage their ASUS devices, check system information, and get customer support.

2. Project Objective

The main objectives of this project are:

- To design a user-friendly interface
 - To understand HCI principles
 - To improve usability
 - To create interactive screens
 - To design a mobile application prototype
-

3. Tools Used

Figma

The application interface was designed using **Figma**.

Figma was used because:

- Easy to design UI
- Supports prototyping
- Allows screen linking

- Professional tool
-

4. Application Overview

MyASUS is a mobile application that allows users to manage their ASUS devices easily.

Users can:

- Check device information
- Contact support
- Update system
- Manage settings
- View account details
- Manage your Device
- Check your device to the centre

The application is designed for simplicity and ease of use.

5. Target Users

The target users of this application are:

- ASUS laptop users
- Students
- Office workers
- General users

These users need simple and easy navigation.

6. Screen Flow of Application

The application follows a simple navigation structure.

6.1 Splash Screen

This is the first screen that appears when the user opens the application.

Features:

- App logo
- Loading screen

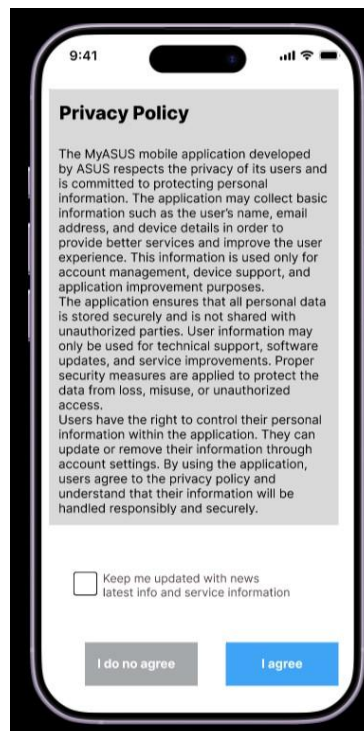

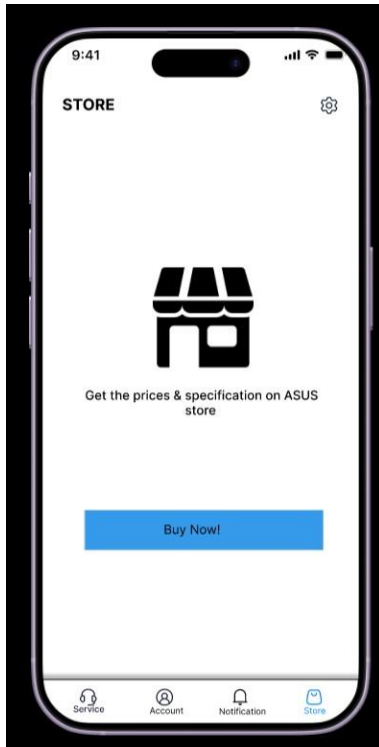

Flow:

Open App → Splash Screen → Login Screen

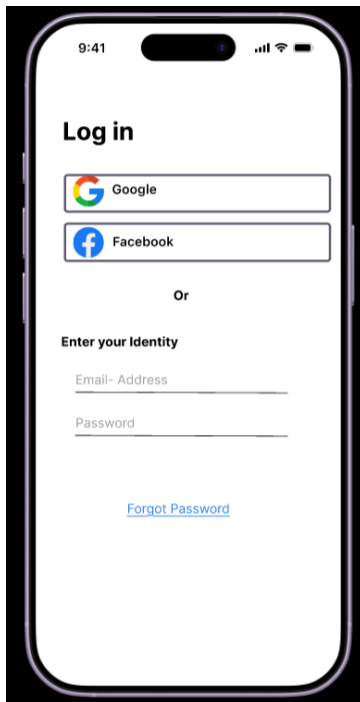

Purpose:

- Introduces application
- Loads data

6.1 Location enabling and privacy policy acceptance

6.2 Login Screen

This screen allows the user to log in.

Features:

- Email field
- Password field
- Login button
- Sign up option

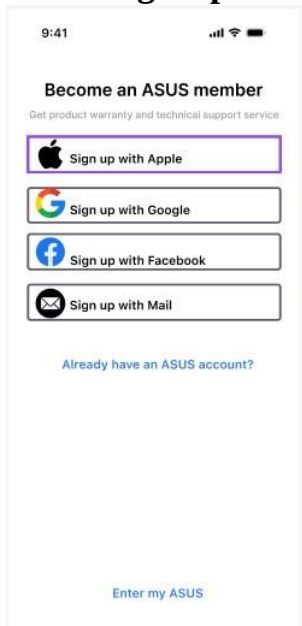

Flow:

Login Screen → Home Screen

Purpose:

- User authentication

6.3 Sign Up Screen

This screen allows new users to create accounts.

Features:

- Name
- Email
- Password

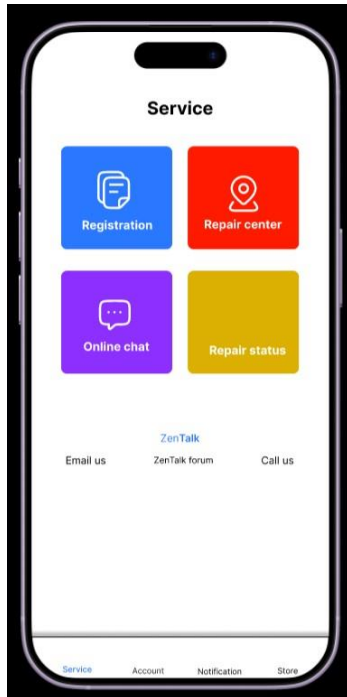

Flow:

Sign Up → Login → Home

Purpose:

- New user registration

6.4 Home Screen

This is the main screen of the application.

Features:

- Device status
- Menu options
- Navigation bar

Flow:

Home → Device Info

Home → Support

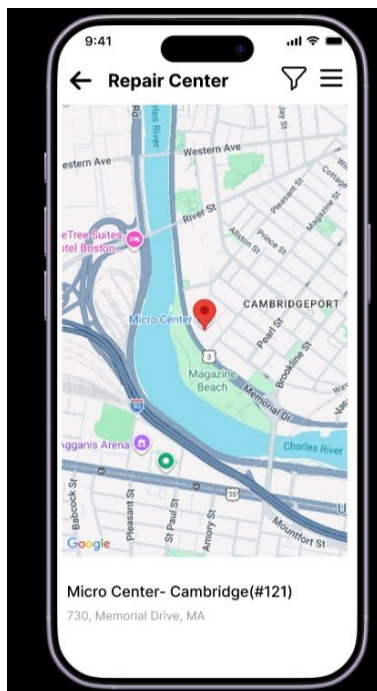

Home → Settings

Home → Profile

Purpose:

- Main navigation

6.5 Repair Center Screen

This screen shows the nearby stores to repair your device.

Features:

- Map show
- Proper address of branch

Flow:

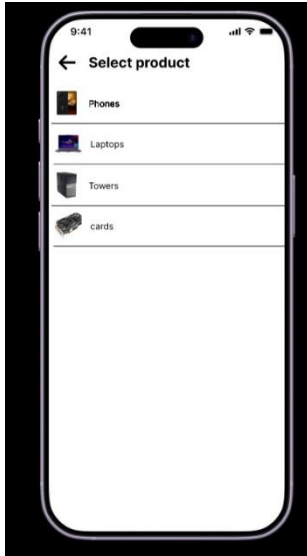

Home → Repair centre → Home

Purpose:

- To locate the store

6.6 Online Chat Screen

6.6.1 Select your product

This screen provides help to users by asking about their issues.

Features:

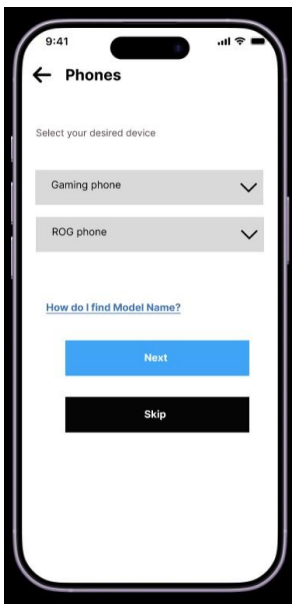

- Help center
- FAQ
- Contact support

Flow:

Home → Online chat → Help Topics

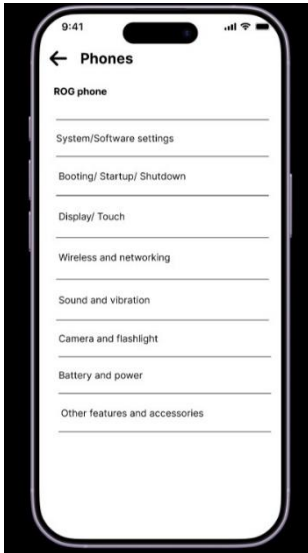

Purpose:

- Customer assistance

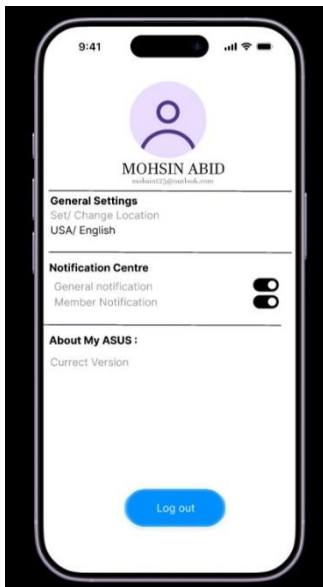

6.6.2 Select your Model and type

In this step we are selecting our specific model to get assistance

6.6.3 Select which part of your device is damaged or need repairing:

Then further browser will give you form to fill

6.7 Settings Screen

This screen allows customization.

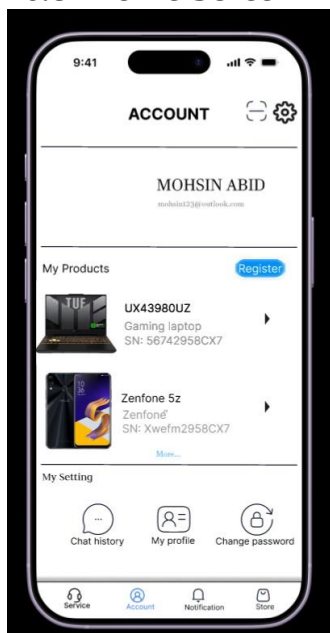

Features:

- Notifications
- Language
- Preferences

Flow:

Home → Settings → Home

6.8 Profile Screen

This screen shows user details.

Features:

- Name
- Email
- Account details

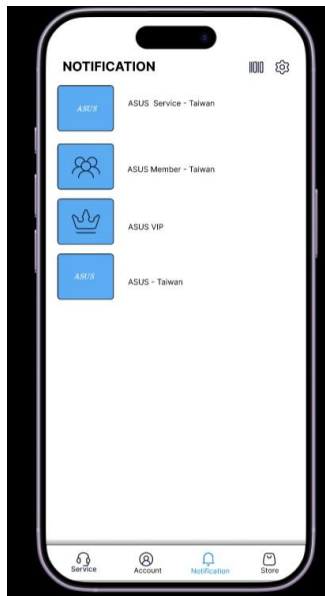

Flow:

Home → Profile → Edit → Home

Purpose:

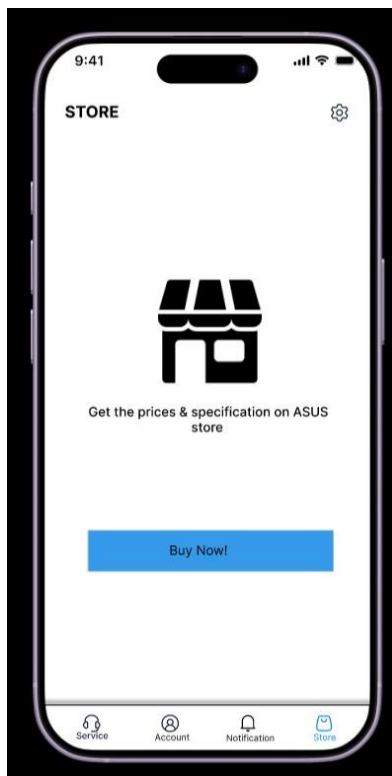

- Account management

6.9 Notification Screen:

Each notification card is designed for clarity, featuring a prominent icon, a timestamp, and concise, actionable text. Critical system alerts are highlighted with a subtle color accent to ensure they are not missed.

6.10 Store Screen:

Designed as a visually engaging launchpad, the Store screen highlights featured products and current deals, providing a preview of the web store's offerings without leaving the app's ecosystem.

7. Navigation Structure

The application uses simple navigation.

Main navigation is through:

- Buttons
- Menu
- Icons

Example Flow:

```
Splash Screen
  ↓
Login Screen
  ↓
Home Screen
  ↓ ↓ ↓
Device Support Settings
```

Navigation is easy and simple.

8. Design Principles Used

1. Simplicity

The interface is simple and easy to understand.

Users can easily find options.

2. Consistency

Same colors and fonts are used.

Buttons look similar.

3. Visibility

Important options are clearly visible.

Users can easily see buttons.

4. Feedback

When user clicks a button, screen changes.

This shows system response.

5. User Control

User can move between screens easily.

Back buttons are available.

9. Usability Features

The application is designed for good usability.

Features:

- Easy navigation
- Clear text
- Simple layout
- Readable fonts

Users can learn quickly.

10. Prototype Design

The prototype was created in Figma.

Features:

- Linked screens
- Clickable buttons
- Navigation flow

Users can click buttons and move between screens.

11. Privacy Policy

The MyASUS application respects user privacy. The application collects basic information such as name, email address, and device information to provide better services.

User information is stored securely and is not shared with unauthorized persons. The application uses security measures to protect data.

Users can update their personal information in settings.

12. Advantages of Design

Advantages:

- Easy to use
- Simple interface
- Clear navigation
- User friendly

13. Problems Faced

Some problems were faced during project.

Examples:

- Screen alignment
- Icon selection
- Screen linking

These problems were solved.

14. Future Improvements

Future improvements can include:

- Dark mode
- More features
- Better animations

15. Conclusion

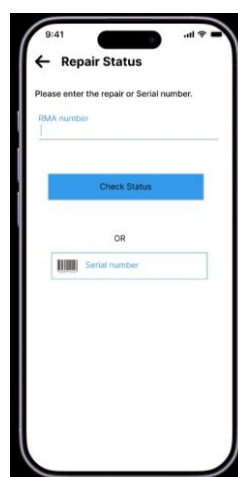

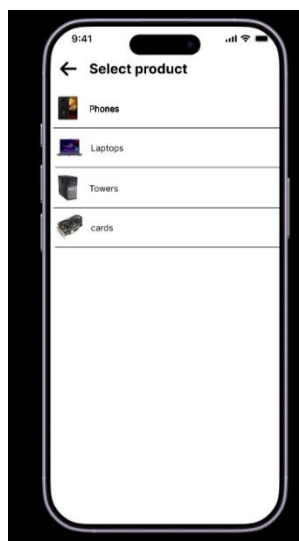

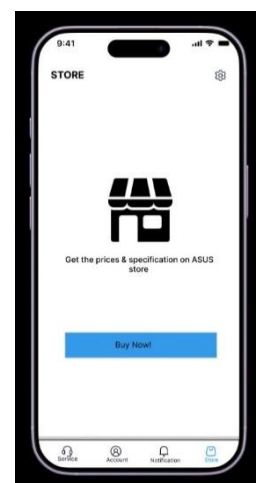

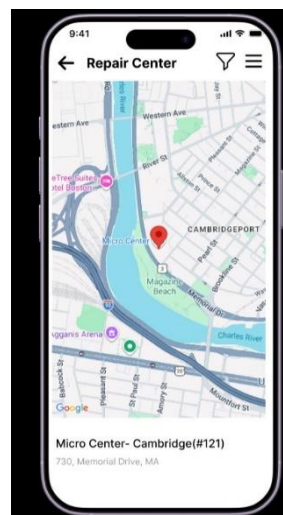

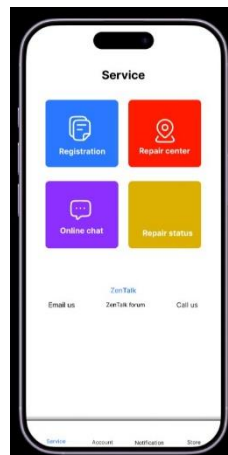

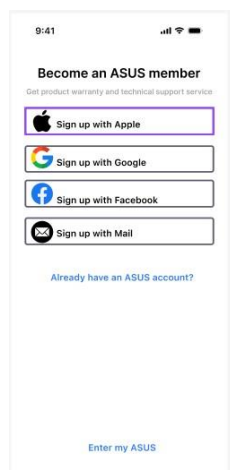

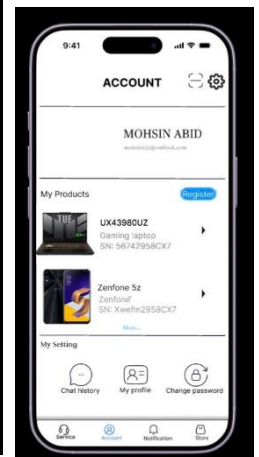

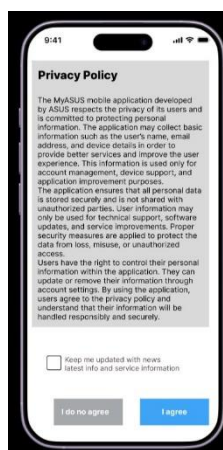

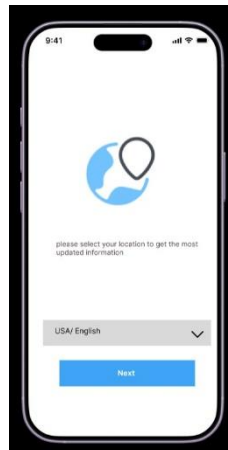

This project helped in understanding Human Computer Interaction concepts.

The MyASUS application interface was successfully designed using Figma.

The design is simple and user-friendly. The navigation is easy and understandable.

This project improved knowledge about UI design and usability.

Full flow of the system:
